

White, 1673.

A New

# ALMANACK

For the year of our Lord 1673,

1673.

Being the year from the worlds  
Creation, 5636.

And the first from Bissextile, or Leap-year.

Calculated and properly referred to  
the Meridian of *Todington* in *Bedford-*  
*shire*, where the north pole is elevated  
above the horizon 52. degrees and 8. mi-  
nutes, so that it may serve for all parts of  
*England*, without any sensible error.

---

By William White.

---

*Laudate eum Sol & Luna, Laudate eum omnes Stellæ  
lucis, Psalm 148. 3.*

---

Cum Privilegio.

A Table to know when the Terms begin and end, and the number of their returns, with the day of the Moneth whereon they will be this present Year, 1673.

Hillary Term begins the 23. of January, and ends the 12. of February, and hath 4. Returns, Viz.	$\left. \begin{matrix} \text{Ostab. Hillar.} \\ \text{Quind. Hillar.} \\ \text{Craft. Purif.} \\ \text{Ostab. Purif.} \end{matrix} \right\}$	Jan. 20
		Jan. 27.
		Feb. 3.
		Feb. 10.

Faster Term begins the 16. of April, and ends the 12. of May, and hath 5. Returns, Viz.	$\left. \begin{matrix} \text{Quind. Paschæ} \\ \text{Tres Paschæ} \\ \text{Mens. Paschæ} \\ \text{Quind. Paschæ} \\ \text{Craft. Ascens.} \end{matrix} \right\}$	April 14.
		April 21.
		April 28.
		May 5.
		May 9.

Trinity Term begins the 30. of May, and ends the 18. of June, and hath 4. Returns, Viz.	$\left. \begin{matrix} \text{Craft. Trinit.} \\ \text{Ostab. Trinit.} \\ \text{Quind. Trinit.} \\ \text{Tres Trinit.} \end{matrix} \right\}$	May 26.
		June 2.
		June 9.
		June 16.

Michaelmas Term begins the 23. of October, and ends the 28. of November, and hath 6. Returns, Viz.	$\left. \begin{matrix} \text{Tres Mich.} \\ \text{Mens. Mich.} \\ \text{Craft. Animar.} \\ \text{Craft. Mart.} \\ \text{Ostab. Mart.} \\ \text{Quind. Mart.} \end{matrix} \right\}$	Octob. 20.
		Octob. 27.
		Novemb. 3.
		Novemb. 12.
		Novemb. 19.
		Novemb. 26.

# Of the Eclipses this Year,

1673.

IN this Year there will be celebrated but two Eclipses, and both of the Sun: but the Moon passeth clear from suffering any such defect, because they of the Sun are central.

The first Eclipse of the Sun happens on *Thursday, February* the sixth day, about our 8. a clock at night, and therefore not to be seen of us, because both the Luminaries will be beneath our Horizon. But unto such who inhabit the longitude of 156. degrees westward from us, it will be total, it happening so near the north node of the Moon, and will appear exceeding dark or black for the time.

The second Eclipse that this Year happens of the Sun, will be celebrated on *Saturday, August* the second, about our nine a Clock in the morning, but will be scarcely seen of us, by reason of the Moons latitude, and parallax. It is possible some small part of it, may be observed towards the end thereof, on the South side of the Sun, but it being so little, it will hardly be discernable in our British Horizon. This latter Eclipse, though invisible to us, may be seen in the *Atlantique Ocean*, and in the greater part of *Africa*; as also by such as pass the *Arabian and Indian Seas*.

All ingenious persons may, on the fifth of *November* this Year, an hour or two before the Sun rises, observe a famous conjunction of *Jupiter* and *Mars* in the East, in four degrees of *Scorpio*, a little to the Southward of the shining stars of the *Ballance*. This Conjunction will be Ecliptical, the Planets latitudes being the same, and *Mars* will hide a great part of *Jupiter* from our sight.

# January hath xxxi. dayes.

The old years past, the new doth now begin,  
Put off the old man, abandon every sin:  
Such as determine in their sins to dweli,  
There is no hope but they run post to Hell.

February hath xxviii. dayes.

Be quiet and sober, and good diet use,  
The help of good Physick do thou not refuse :  
The spring coming on thy blood doth increase,  
Of sin purge thy soul, and with God make thy peace.

# July hath xxxi. dayes.

What plealeth June likes July best,  
Cold Bathes they lov: among the rest;  
The grass that grows, to morrow's Hay,  
And man that's now, asoon in Clay.

August hath xxxi. dayes.

Now gather thy fruits, God send thee good store,  
Remember to give some part to the poor :

Lend them that want, the Almighty favoureth such,  
And in due time repayes them twice as much.

A Table to know  
when the Moon  
will be South  
for every day  
in the year.

days.	Hour.	Minu:	Day.
1	12	46	16
2	1	36	17
3	2	24	18
4	3	12	19
5	4	0	20
6	4	48	21
7	5	36	22
8	6	24	23
9	7	12	24
10	8	0	25
11	8	48	26
12	9	36	27
13	10	24	28
14	11	12	29
15	12	0	30

The Use of the  
Table.

The age of the moon being found in the Kalender (that is) how many dayes is past from the time of her change. Therewith enter this table, & having found it in the first column to the left hand, if it be before the full moon; or to the right hand, if it be after the full moon: you shall have in the middle column, her coming to the South, before or after, as is noted in the foot of the Table.

As for Example.

The 21. day of February, the Moon is 5 dayes old, whereupon entering the table in the first column to the left hand, right over against it towards the right hand, I find 4. and 48. shewing me her coming to South to be at 4. a clock, and 48 min: after noon. But when it was 5. dayes old, as it was the day before, being the sixt day of February, her coming to the South was just at 4. a clock after noon.

From the change to the full, the Moon comes to the South, after noon.

From the full, the Moon comes to the South before noon.

B

A very

A very plain and easie table to find the  
true interest due upon any sum of mony,  
from five shillings to an hundred pounds,  
for a year or under, after the rate  
of six pounds in the  
Hundred.

## The Explanation & Use of the former Map & Table.

First for the Map: The figures in each shire of the map are to shew you the names of every County, & the Letters in the same are for such uses, as I will shew hereunder.

You must understand that London is in Middlesex, which County of Middlesex hath the figures of 22 in it, & the little black speck, or spot therein signifieth London. Now if you would readily find the name of any shire therein, and how many myles the middle of the said County (in a straight line) is from London, & what point of the Compasse it lyeth from the said City; resort then to the Table of Shires on the other side, and it will resolve you.

As for example, Berkshire it hath the figure of 1 in the map, & so it hath likewise in the Table; whereto sheweth that the middle or heart of that shire is 40 myles from London in a straight line, & it lyeth full west from the City, and looking so hard toward the right-hand, it sheweth it hath no City, 11 Market-Towns, 2 Castles, 140 Parishes, 3 Rivers, & 13 Parks: Again, Buckinghamshire hath the figure of 3 in the Map, & so it hath before it in the Table, the heart or middle of which shire is from London 35 myles, & lyeth North-west by west from the said City, it hath no City, 11 Market-Towns, no Castle, 185 Parishes, 2 Rivers, and 15 Parks; and so of the rest.

The use of the Letters in the Map is this, S doth signifieth part of Scotland, I part of Ireland, F part of France, M the Isle of Man, W the Isle of Wight, L the Lizard point; H Holy-head, the X the Irish Sea, B the British or English Sea, G the German Sea, Ba Berwick, D Dover, N Newcastle, C the pointes of Compasse, & the Scale of Miles, by which you may measure the distance of any place, for every black degree is five myles, so is every white.

The 39 Shires from Berkshire to Yorkshire are the English Shires, & the other 13 from Anglesey, to Radnorshire are Welsh.

It may be something further in Miles to the middle of each shire, by reason of the crookednesse of the highways, hills, and dales, but what is here set down is meant in a straight line from London, as is said

## A Prognostication.

### Rules of Mensuration.

A finger's breadth is four barleycornes in the banes; and an Inch threes barleycorns in length; 3 hands breadth four fingers: A span is three hands breadth: A foot is four hands breadth: A Geometrical Pace is like foot: an English Pearch is xvi. foot  $\frac{1}{2}$  A furlong is a hundred and twenty like Paces, or a hundred twenty and six foot: An English Furlong is six hundred and threescore foot, or a hundred and thirty two paces: A League is a thousand and five hundred paces: An Italian Mile is a thousand paces, or eight Furlongs: A common German Mile is thirty two Furlongs: An English Mile is eight Furlongs. An Acre is forty Pearches in length, and four in breadth.

### How to judge what Weather will follow, by the rising and setting of the Sunne.

The Sun rising bright & clear, signifieth a pleasant day: If he rise very red, it promiseth rain: if in his rising he be thinly overcast with a cloud, it betokeneth foul weather: If the sun drize the clouds before him into the West, it signifieth fair weather: If at his rising there appear a circle about him, & vanisheth away equally, it betokeneth fair weather. Also if he setteth red, it signifieth fair weather: If at his setting he be of divers colours, or cloudslike water, it threateneth rain. If at the rising of the Sun, his beams seem red, or long, or encompassed with red clouds, it signifieth great winds: if at his rising there appear a thick mist, or if it raineth in the evening, it threateneth very foul weather to follow. Also if the Sun beams be spotted either green, pale, or black, or gathered to a cloud, it signifieth rain. The Sun setting clear without any cloud, signifieth a fair night to ensue. If the circle

circle, or circles about the Moon be clear, or of no continuance, look for fair weather: If there be many circles, it signifieth winds: the redder they are, the more vehement winds. If the circles are here & there broken, & are thick & black, look for cold wind or snows: or if he settle behind a great black cloud, rain follows.

#### How Weather is foreknown by the Moon.

If the Moon in the third day of her change, or 3 dayes before her full, or in the midst of the quarter, be found of pale light, nothing compassing her, the ends direct up, she promiseth faire weather: but bent to red colour, prophetheth winds. The Moon pale, or somewhat black or thick, threatneth rain. When the Moon is five dayes old, mark the tips of her horns, if they be blunt, it signifieth rain: if sharp-pointed & prickling upwards, great winds. If in the fourth day after her change, she have a red circle about her, it signifieth winds and rain.

#### Of the judgment of Weather by the Stars.

If the Stars appear of much light, and seem to be of more bignesse and blazing then ordinary, it betokeneth great windes and moysture in that parte where they seem so: and in winter, great frosts. When dim Stars appear with long fiery tayles, it threatneth winds, and great drought: the more in number, the greater will be the effect. Also when Stars seem to shoot or fall, it signifieth great windes in that place: If they seem to shoot in divers places, it signifieth divers windes: If in all places, windes, thunder, lightning, and most tempestuous weather.

#### How to judge of the weather by the Clouds.

Black clouds flying from the east, signifieth Rain at night; if from the west, rain the next day; if they fly low, and appear to settle upon the tops of hills, it is a signe of cold weather, if they be

be full charged, and appear white like flowers, hail is at hand: if white clouds appear in winter, two or three days together at sun rising, it is a sign of cold and snow; but black clouds signify rain. If red sky in the evening, and a gray morning is a sign of a fair day. Mills falling in the morning, in spring or harvest, also mills over ponds or waters in the morning shew rain. If the clouds fly swiftly in the ayre, it signifies rain from that part of the heavens, especially from the north or south. If thick white clouds gathered together in many places like blocks, or heaps of wool, appear in many places, it is a sign of rain: but if thick dark clouds towards the north or west near the earth, presently rain, and if like hills a little above the earth, foul weather is over. If mills descend from the hills, and settle in the valleys, it is a sign of fair hot weather next day, or if white mills arise from the waters in the evening.

How to judge of the weather by the Rainbow.

The natural signification of the Rain-bow, is to shew rain either past or to come. The Rain-bow appearing when it is fair, is a sign of foul weather; when it is foul if it appear, it is a sign of fair weather; the greener it appears, the more rain, the redder the more wind; if before noon, then the rain is spent; if the rain-bow appear about one or two in the afternoon, then rain is near. If rainbow in the morning is a sign of wet (unless there be drought in the air): if it appear in the evening, it is a sign of fair weather (unless the air abound with moisture.) If rain-bow at night opposite to the moon, is a sign of much small rain and wind to follow. If rainbow after long rain is a sign of fair weather presently; if two rainbows appear together, it is a sign of rain within one or two days after.

## The Assize of bread plain for all weights.

Towne- bakers in Corpo- rations.	By Troy weight, having twelve ounces in a pound and xx. penny weight in each of those xii. ounces.	By Avoir-du-pois, wh. over-weight having, xvi. ounces in the pound, our Common weight.	Com- try-ba- kers out of Corp.

The proportion of the pound Avoir-du-pois to the pound Troy, is as 60 to 73, so that 60 pounds Avoir-du-pois are equal to 73 pound Troy. The proportion of the ounce Troy to the ounce Avoir-du-pois, is as 73 to 80 so that 73 ounces Troy, are equal to 80 ounces Avoir-du-pois. Therefore the pound Avoir-du-pois is greater than the pound Troy; and the ounce Troy is greater than the ounce Avoir-du-pois.

Wheat at 5 shillings the Bushell at Stryke, the Town Bakers penny white, is (by Troy) 7 ounces, 7 penny weight; by Avoir-du-pois 8 ounces; And the Country Bakers penny white (by Troy) 7 ounces 13. penny weight; by Avoir-du-pois 8 ounces and one quarter,

White. 1673.

To find the time of the Sun-rising, or setting, and consequently the length of the Day and Night throughout the whole

Y E A R.

For the ready finding of the Sun's rising and setting, I have added the subsequent Table, the use whereof is thus: In the head of this Table (consisting of fourteen columns) are placed the names of the twelve Moneths viz. January, February, &c. July, August, &c. and in the first & eighth Column thereof, are placed the daies of the Moneths, from 1. to 31. Moreover, in the head of the Table, under the names of the Moneths, is Ril. S. Set, which signifieth Sun-rising, and Sun-setting, and below that is H. M. H. which signifieth, Hours, Minutes, Hours.

For example.

I would know the Sun-rising and setting January 10. first, I find January in the head of the Table, and in the first Column on the left hand I find the tenth day, and right against the tenth day under January I find 7 50. 5. which shewes me, that the Sun riseth at seven a clock, and fifty minutes past in the Morning and setteth at fifty minutes before five at night; and so for the rest.

Now if you would know the length of the day and night, double the hour and minute of the Sun's setting, and the sum is the length of the day; and if you double the hours and minutes of Sun-rising, you shall have the hour of the night.

Example.

The tenth day of January I would know the length of the day and night: I find (by the precedent directions) the Sun riseth at 7. hours 50. min. which doubled is 15. hours 40. min. for the length of the night: and 4. hours 10. min. the Sun-setting being doubled, makes 8. hours 20. min: for the length of that day:

1659	16	B	7	17
1660	17	A G	8	28
1661	18	F	9	9
1662	19	E	10	20
1663	20	D	11	1
1664	21	C B	12	12
1665	22	A	13	23
1666	23	G	14	4
1667	24	F	15	15
1668	25	E D	16	26
1669	26	C	17	7
1670	27	B	18	18
1671	28	A	19	29

For example, in  
the year 1671, the  
circle of the Sun  
answering there-  
unto is 28, the  
Sundays letter A,  
the Golden num-  
ber 19, and the  
Epact 29. And the  
next year 1672,  
this circle begin-  
neth agajn, for the  
circle of the Sun  
is 1, the Sundays  
Letter G F, the  
golden number 11  
and the Epact 1.  
So that the circle  
of the Sun and  
the Dominicall  
Letter begin after  
28 years, the cir-  
cle of the Moon  
called the golden  
number, and the  
Epact begin every  
19 year, reckon-  
ing forwards in  
the circle for years  
that are to come,  
& backwards for  
yeares that are  
past.
